

How to Secure the Connected Kitchen

01

Use application-based discovery to identify all assets and applications

Know your organization's security program and policies

02

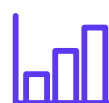

03

Monitor behavior of device and applications to see changes that may come from cyber threats

Update firmware on devices as soon as new (safer) versions are available

04

05

Use certificates to encrypt traffic and authenticate devices

Rotate all passwords on a regular schedule using high-strength passwords

06

07

Share reports of cyber threat activity and best practices for defending against them

Have an ongoing training program on cyber awareness specific to Connected Kitchen environments

08
